

AIC-PINNACLE × OFFSYLLABUS

What Amay Is Asking — Simplified

A practical guide to understand AIC-Pinnacle, the assignment, and where OffSyllabus can fit.

AIC has the ecosystem. OffSyllabus can design and activate the experience.

1. The entire assignment in one line

Amay wants you to **understand AIC-Pinnacle deeply first, then use that understanding to propose a different and useful community engagement experience for its existing network of founders, experts and agencies.**

2. What AIC-Pinnacle is

Think of AIC-Pinnacle as a startup ecosystem hub rather than simply a fund.

- It supports startups across different stages, from idea/early validation to incubation and acceleration.
- It runs or participates in structured programs such as EMERGE, EVOLVE, ELEVATE, Idea Utsav, SISFS and TIDE 2.0-related activities.
- It connects founders with mentors, investors, industry, partners, technology/product support and other ecosystem resources.
- Some funding comes through government-backed schemes or investor networks; do not assume every amount mentioned by AIC is AIC proprietary capital.

3. The people already inside the AIC ecosystem

Who	What they bring	What they may need
Startup founders	Ideas, products, traction, problems to solve	Customers, capital, talent, expertise, partnerships
Industry experts	Domain knowledge and business context	Relevant founders, new ideas, collaboration opportunities
Mentors	Guidance, pattern recognition, connections	Good-quality startups and meaningful interactions
Investors	Capital and investment perspective	Investment-ready opportunities
Agencies / service providers	Execution across marketing, tech, legal, hiring, etc.	Clients, partnerships and ecosystem access
Corporate / ecosystem partners	Business problems, pilots,	Solutions, innovation partners,

Who	What they bring	What they may need
	distribution, credibility	startup access

4. What AIC wants you to research

1. What AIC-Pinnacle is and how it is structured.
2. Which startup stages and sectors it supports.
3. How its incubation and acceleration programs work.
4. How funding is structured: government schemes, grants, investment opportunities and external investors.
5. How startups apply, get selected and enter different programs/cohorts.
6. Which startups are in its ecosystem and which success stories are publicly documented.
7. What events and community formats AIC already runs.
8. Who is already part of its founder, mentor, investor, industry and agency network.

5. What AIC is NOT asking for

- He is not asking you to become an investment analyst or reconstruct AIC's confidential finances.
- He is not asking for another generic networking event.
- He is not asking OffSyllabus to replace AIC's incubation or funding role.
- The research is the input; the community engagement concept is the output.

6. Where OffSyllabus fits

AIC-Pinnacle	OffSyllabus
• Startup founders • Mentors / experts • Investors • Industry / corporate links • Incubation and acceleration programs	• Community experience design • Young talent / student participation • Real-world challenges • Event production and content • Post-event community follow-up

7. The easiest way to see the relationship

AIC has the people, programs, credibility and startup ecosystem.

OffSyllabus can create a format that makes those people actually do something together.

The result should be deeper connections, collaborations, challenges, pilots, internships, partnerships or other measurable outcomes.

8. What “community engagement” should mean here

Do not start with “What event can we host?” Start with “What useful interaction is missing from the existing community?”

If the problem is...	OffSyllabus can create...	Desired outcome
People network but do not collaborate deeply	Structured problem-solving session	Useful new relationships
Startups need young talent	Real-world startup challenges	Projects / internships / hiring leads
Founders need customers or pilots	Reverse pitch / corporate problem room	Pilot discussions
Experts know AIC but are under-used between events	Expert marketplace / office hours	Mentor connections
Events create attendance but weak follow-through	Commitment + 30-day follow-up system	Measurable conversions

9. Three realistic OffSyllabus concepts

Concept A — The Problem Room

Founders or industry partners bring real problems. Small mixed teams of founders, experts, agencies and young talent work on them and define a practical next step.

- Why it fits: it uses AIC’s existing ecosystem instead of recreating it.
- Best outcome: pilot, partnership or mentor connection.

Concept B — Reverse Demo Day

Instead of startups pitching investors, companies or ecosystem partners pitch their real needs to startups: technology needs, growth problems, customer problems, operational problems or pilot opportunities.

- Why it fits: it flips the normal startup-event format.
- Best outcome: startup-to-corporate conversations and pilots.

Concept C — AIC x OffSyllabus Real-World Challenge

An AIC startup posts a real business problem. OffSyllabus recruits participants to solve it. The startup reviews the work and the strongest participants get feedback, exposure, project or internship opportunities.

- Why it fits: it connects AIC startups with OffSyllabus’s young-talent / real-world learning model.
- Best outcome: portfolio projects, internships, hiring leads or startup collaborations.

10. If we choose one event, what should it look like?

Recommended starting format: The Problem Room

Part	What happens
Arrival	Curated participants + quick “I can offer / I need” profile.

Part	What happens
AIC context	5–10 minute introduction to the ecosystem; no long keynote.
Problem pitches	5–8 real problems, around 3 minutes each.
Team formation	Participants choose problems and form mixed teams.
Solve	30–45 minutes to understand the problem and build a practical solution.
Share	Each team presents what it would do next and who needs to be involved.
Commit	People record actual next steps: pilot, mentor call, investor conversation, internship, partnership.
Follow-up	OffSyllabus follows up after 7 and 30 days and reports what actually happened.

11. What success should look like

Do not judge the event mainly by registrations or Instagram reach. Judge it by what happens because the event happened.

- Meaningful founder ↔ expert connections
- Potential pilot or customer conversations
- Mentor relationships
- Investor follow-ups
- Startup ↔ young-talent project or internship opportunities
- Partnerships between startups, agencies and ecosystem partners

12. What you should eventually present to Amay

- A short AIC-Pinnacle research summary.
- A simple map of AIC's ecosystem and existing event formats.
- The gap/opportunity you identified.
- One recommended OffSyllabus event concept plus 1–2 alternatives.
- Participant profile and target audience.
- Event flow and activities.
- AIC role vs OffSyllabus role.
- Expected outcomes and how success will be measured.

13. One-minute explanation you can remember

“AIC-Pinnacle is a startup ecosystem hub. It already has founders, mentors, investors, industry people and agencies, plus incubation, acceleration and funding programs. Amay wants me to understand how that ecosystem works and what AIC already does. Then I need to find a community-engagement opportunity where OffSyllabus adds value without duplicating AIC. The simplest positioning is that AIC brings the ecosystem and OffSyllabus designs the experience. A good event should make people collaborate on something real, not just attend a panel and exchange contacts.”

14. Research caveat

Public sources are enough to understand AIC-Pinnacle’s ecosystem model, programs and public-facing funding routes, but they do not fully disclose confidential investment terms, internal selection scoring, or exact proprietary capital deployed. Treat those items as “not publicly established” rather than making assumptions.
